

Seminar Series - 2017

When: Friday 22nd SEPTEMBER @ 12:00 pm

Where: Rand Theatre, Level 8, Medical Building

“The neurobiology of respiratory sensations: Implications for pulmonary disease”

Dr Stuart Mazzone

Department of Anatomy & Neuroscience
The University of Melbourne

Dr Mazzone completed his doctoral training in 2000 at the University of Tasmania followed by post-doctoral training at the Asthma and Allergy Center of Johns Hopkins Medical Institutions in Baltimore, (USA).

He returned to Australia in 2003 and established the Airway Neurobiology Laboratory at the Howard Florey Institute and in 2008 he was recruited to the School of Biomedical Sciences at the University of Queensland where he headed the Laboratory for Respiratory Neuroscience and Mucosal Immunity until the end of 2016.

Dr Mazzone has spent 14 years as an NHMRC fellow but now holds an academic appointment in the Department of Anatomy and Neuroscience here at UoM. His research focuses on the anatomy, physiology and pharmacology of the neural pathways regulating airway defensive reflexes and respiratory sensations, including the neural processes that important for the regulation of airway smooth muscle tone and coughing in patients with pulmonary disease.
