

Seminar Series - 2017

When: Monday 25th September @ 12:00 pm

Where: Rand Theatre, Level 8, Medical Building

*“High Throughput Screening:
A pivotal technology for the
translation of academic
research into early drug
discovery”*

Dr. Hélène Jousset Sabroux

Head of Screening Laboratory,
Walter Eliza Hall Institute

Dr. Hélène Jousset Sabroux is the head of WEHI screening laboratory and ACRF breakthrough technology laboratories in the Systems Biology and Personalised Medicine Division at the Walter and Eliza Hall Institute of Medical Research. With 9 years of experience in drug discovery gained from both industrial and academic backgrounds, she is an experienced high throughput screener with a successful track record in leading early drug discovery projects. Prior to joining the Walter and Eliza Hall Institute of Medical Research, Dr. Jousset was a senior scientist in Merck Serono Geneva where, in partnership with biologists and medicinal chemists, she conceived and implemented 5 successful screening cascades that led to the discovery of valuable new assets such as the identification of lead compounds or pre-clinical candidate in the neurology and immunology field.
